GitHub: https://github.com/Krishy1625 , Portfolio: https://krishy1625.github.io/Portfolio/

Preferred Name: Krish Patel

Profile:

MSci Computer Science graduate from King's College London and current Java developer at Mthree, achieved a First-Class result in my Master's year (71%), now developing my Master's project into a commercial product. A year of real-world client experience across Python, AWS and Node.js, with three years of front-end experience in React. Proven track record delivering full-stack, mobile, and cloud-based applications for real clients, including a solution built with Amazon. Practical experience integrating AI technologies such as GitHub Copilot, Claude and ChatGPT.

Education / Qualifications:

- **King's College London, University of London (2022 - 2026):**
  MSci Computer Science with Honors, BCS Accreditation, Achieved **Upper Second Class Honours (2:1)**
- **First Class Honours, Master's year (71%)**
- **Wembley High Technology College, Sixth Form and Secondary School:**
  - A-Levels: **AAA** in Biology, Chemistry and Mathematics, also achieved A in AS Level Further Mathematics
  - **14 GCSE's**, **9** in Maths, **8** in English, **9, 8, 8** in triple science

Skills Proficient In:

- Core Languages: Python, Java, C++, Dart
- Frontend & Frameworks: React, Flutter, Riverpod, REST APIs
- Cloud & Infrastructure: AWS (Lambda, S3, DynamoDB, API Gateway), Railway
- Databases: PostgreSQL, Firebase, SQL, NoSQL
- Tools & Practices: Git/GitHub, JIRA, Figma, Trello, Agile/Scrum
- Other: Linux, Arduino, Office 365, PyTorch, Matplotlib

Projects and Experience:

Java Software Development | Mthree | September 2026 – Current

- Completed intensive **Java software development training** covering **object-oriented programming (OOP)**, inheritance, polymorphism, interfaces and exception handling.
- Developed Java applications using **Spring Boot**, **MVC architecture**, service layers and **DAO patterns**, applying separation of concerns and maintainable design principles.
- Worked with **REST APIs (Postman)**, **SQL** and **JDBC** to support backend development.
- Applied **unit and integration testing**, debugging, **Git version control** and software engineering best practices.

Masters Project | Software and AI development | Worked with Amazon and Waltham Forest Council (September 2025 - Current) (Grade: 80%)

- Designed and developed an AI-powered parking charge appeal management system to streamline case reviews and **reduce administrative workload** for council teams.
- Architected a **scalable cloud-based solution** using AWS Lambda, S3, DynamoDB, and API Gateway, focusing on reliability, security, and cost efficiency. a scalable cloud-based solution using AWS Lambda, S3, DynamoDB, and API Gateway, focusing on reliability, security, and cost efficiency.

- Collaborated weekly with **council stakeholders** to analyse existing workflows and translate business requirements into effective digital solutions.
- Facilitated **agile sprint** meetings, coordinating team progress, task planning, and software delivery.
- Developed a responsive React frontend with an intuitive UI/UX, integrating with backend services through **secure REST APIs**.

Software Developer Intern | The Kusp (June – September 2024)

- Contributed to a London-based startup, providing product feedback that influenced feature development and organisational **decision-making**.
- Developed frontend and backend integration, with a focus on secure API integration using React and REST APIs
- Collaborated with a cross-functional team using JIRA and Figma to track progress and maintain product quality

University Project | Android & iOS Food Logging Application (2023 – 2024 Academic Year)

- Built an iOS and Android fitness and food-logging app using Flutter, Dart, and Firebase, supporting custom recipes and goal tracking.
- Owned deployment, backend integration, and testing across a full **Agile development cycle.**

University Research Dissertation | LLM Explainability for Software Engineering (2024 – 2025 Academic Year)

- Created a python application that evaluates the value of tokens inside of a prompt using different evaluation strategies
- Developed a **user-friendly front-end** interface to show users the individual **heatmaps** and reports of the importance scores of their prompt's tokens
- Developed using: Python, OpenAI API, GitHub, Rest APIs

Personal Project | Crypto Real-Time Analytics Dashboard | June 2026 - Ongoing

- Built and deployed a full-stack real-time cryptocurrency analytics platform, with a Streamlit frontend, a Python background collector polling the CoinGecko API, and a Neon PostgreSQL database for persistent storage.
- Designed the data pipeline to continuously poll, process, and store live market data, handling dependency and environment configuration issues to achieve a stable production deployment.

EXTRACURRICULAR ACTIVITIES

Research in Electronics (RIE) Society | Software Lead & Outreach Member

- Collaborated with Cambridge University to build Robots for Competitions such as Unibots
- Led multiple software development initiatives, guiding teams and driving project success and received **£600 funding** for the society due to **my project** idea for an exhibition

Cybersecurity Capture the Flag Competitor and Teacher

- I actively participate in CTF competitions and explore cybersecurity through articles, focusing on improving my understanding of defensive and offensive security, while also actively **creating challenges** for CTFs
- I also **taught** how to use **ethical hacking tools** to university students as part of the KCL Cyber Security Society
